Conclusion

2. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure and further shows the state of the art:

US Patent 6,079,242; US Patent 5,679,181; US Patent 5,532,051; and US Patent 6,406,558

JP 05317907 A

3. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Teresa M. Bonk whose telephone number is (571) 272-1901. The examiner can normally be reached on M-F 7:30AM - 5PM with alternating Fridays.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Derris Banks can be reached on (571) 272-4419. The fax phone number for the organization where this application or proceeding is assigned is 571-273-9900.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).

DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1 and 2 are rejected under 35 U.S.C. 102(b) as being anticipated by Kimura et al. (US Patent 4,036,600). Kimura et al. discloses a method for manufacturing steel including prestraining a steel plate by tensile forces acting along one axis; wherein pre-straining comprises a skin pass mill process on the steel plate, and the skin pass process comprises a reduction rate between about 1.8% to about 2.0% when a cold-rolled steel plate is fabricated ("skin pass rolling with a reduction rate of thickness of 2%", Column 3, lines 67-68); performing a press process (press rolling, Column 2, line 68) with respect to the steel plate and enhancing yield strength of the steel plate based on an increase in the degree of work-hardening ("increase hardness of the steel sheet", Column 3, line 5).
